## BayCEER Kolloquium

Vortragsreihe Ökologie und Umweltforschung

Donnerstag 29.10.2009, 16:15 Uhr, H6

Anschließend Postkolloquium mit Bier und Brezeln im Foyer H6

# Dr. Thanh Nguyen

University of Bayreuth, Department of Plant Ecology

## Agricultural Policy Analysis: The cases of Vietnam and South Korea

The presentation presents two case studies on agricultural policy analysis from economic point of view. The one in Vietnam, which had completed, examined the impact of land reform policy on the economy of farm households with regard to three important aspects (1) agricultural production (inputs and outputs) which can help to reduce poverty; (2) land market operation (land rental and land sales) which can promote efficiency of resource use and promote economic structural change; and (3) afforestation by farm households which contributes to rehabilitation of natural resources. The study used multivariate econometric regression and cost-benefit analysis to examine the issues from household perspective.

The case study in South Korea, which is at its initial stage, simply reflect what are going to be done in the next two years from economic perspective. This research is part of the TERRECO project of BayCEER. Different methodological issues will be presented for these two projects. At the beginning of the presentation, some basic concepts on economics are demonstrated to facilitate the audience who are not familiar with economics for better understanding the two case studies. It is also worth to remind that the presentation is not intended to compare these two countries.

Die Vortragsreihe ist eine interdisziplinäre Plattform zur Information und Diskussion für Studierende, Forschende und Lehrende
