

Kolloquium

zur Besetzung der W1-Professur

Atmosphärische Chemie

12./13. Juli
2018

UNIVERSITÄT
BAYREUTH

Lehrprobe
S 21, GEO

Formation of aerosols:
sources, transport
and sinks

Donnerstag, 12. Juli im H8, GEO

14:00 – 15:00

Dr. Martin Brüggemann
Leibniz-Institut für Troposphärenforschung, Leipzig

From Small Molecules to Global Effects - Resolving Atmospheric Multiphase Chemistry by Mass Spectrometry

12:30 – 13:15

15:00 – 16:00

Dr. Felix Klein
Bad Säckingen

Identification and characterization of indoor and outdoor air pollution sources

13:15 – 14:00

Freitag, 13. Juli im H6, GEO

Lehrprobe
S 22, GEO

9:00 – 10:00

Dr. Marianna Conte
Institute of Atmospheric Sciences and Climate, CNR, Bologna

Characterization of aerosol concentrations and corresponding fluxes in different backgrounds: urban and suburban

10:15 – 11:00

10:00 – 11:00

Dr. Alexander Moravek
Department of Chemistry, University of Toronto

Reactive trace gases impact particle formation and air quality: How studying sources and sinks helps unveil relevant processes

11:15 – 12:00

11:00 – 12:00

Dr. Anke Christine Nölscher
Referat Messtechnik, Deutscher Wetterdienst, Offenbach

Exploring atmosphere-biosphere interactions: observations of total OH reactivity, volatile organic compounds and their photo-oxidation products

9:15 – 10:00
